1.1 Application

The Compact Genset Controller, CGC 400, is a microprocessor-based control unit containing all necessary functions for protection and control of a diesel engine. Furthermore, it contains a three-phase AC voltage measuring circuit. The unit is equipped with an LCD display presenting all values and alarms. CGC 400 is a compact flexible unit designed for the following applications:

1. Automatic engine start/stop
2. Engine protection
3. Breaker control
4. Generator protection
5. Automatic Mains Failure (only CGC 413)

1.1.1 Setup

Setup is easily done via a PC Windows® based utility software (password-protected). The PC utility software offers additional features such as monitoring of all relevant information during commissioning, saving and downloading of settings and downloading of software updates. Furthermore, the settings can be accessed via the display push-buttons (password-protected).

1.1.2 Language

Master language is English and furthermore, there are selectable languages. These are listed in the order specifications.

1.1.3 Translation

This function makes it possible to change all texts used in the unit.
